In review of Applicant's Information Disclosure Statement filed August 9, 2006, it is noted that Applicant does not include a 1449 form. Applicant is requested to provide a PTO-1449 form listing the cited documents for Examiner to consider.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over KOJIMA (6,633,293).

As per claim 1, Kojima teaches the claimed "moving picture creation apparatus" comprising: "a structure analysis section that receives a structured scenario description describing information related to objects and rendering, and extracts the information related to the objects and the rendering from the structured scenario description" (Kojima, image managing section 215); "a moving picture component search section that extracts moving picture components corresponding to the extracted objects" (Kojima, scenario managing section 211); and "a moving picture configuration section that extracts a rendering setup corresponding to the extracted information related to rendering, and creates a moving picture configuration description using the rendering setup extracted for the moving picture components corresponding to the objects" (Kojima, column 7, lines 34-60).

Claim 2 adds into claim 1 "a rendering knowledge base that stores rendering templates which associate information related to rendering with the rendering setup corresponding to the information related to rendering, wherein said moving picture configuration section extracts a rendering setup corresponding to the information related to rendering extracted from said rendering knowledge base" (Kojima, command analyzing section 213).

Claim 3 adds into claim 1 "the information related to rendering comprises information related to a director name, touch or genre, and the rendering setup comprises a rendering setup corresponding to the director name, touch or genre" (Kojima, column 8, lines 20-37).

Claim 4 adds into claim 1 "the information related to rendering comprises a description related to at least one of positions of objects, actions and picture taking method, and the rendering setup comprises a rendering setup corresponding to the actions " (Kojima, column 8, lines 38-55).

Claim 5 adds into claim 1 "the structured scenario is a structured description of the information related to the objects and the rendering" (Kojima, column 9, lines 4-19).

Claim 6 adds into claim 1 "a moving picture play section that generates a moving picture from the moving picture configuration description; a display section that displays

the moving picture; and an operation section that enters information that changes the rendering setup for the moving picture displayed" (Kojima, column 9, lines 4-56).

Claim 7 adds into claim 1 "a moving picture play section that generates a moving picture from the moving picture configuration description; a display section that displays the moving picture; and an operation section that enters information that changes the moving picture components used for the moving picture displayed" (Kojima, column 9, lines 4-56).

Claim 8 claims a method based on the apparatus of claim 1, therefore, it is rejected under the same reason.
